Re: Elk Creek TMDL

Dear Roxanne:

As you requested, following and attached is information in response to Bruce Zander's questions regarding our TMDL submission. Four maps illustrating the location of the following are attached.

1. Map 1 - All restoration sites (pink).
2. Map 2 - Rechannelization (purple) and bank revetement (yellow) areas.
3. Map 3 - Fish sampling sites (green) and macroinvertebratesampling site (blue), and
4. Livestock fencing and grazing management areas (orange).

Response to Mr. Zander's questions is difficult since we have never had any maps made showing the sites. I prepared the attached maps based on sketches we made through the process and personal knowledge, etc. I trust these maps are adequate for review by EPA.

Please should note that additional work may be done this summer, including several bank revetements. Fish habitat improvement structures are still under consideration, however, the rechannelization work and bank revetements have

created fish habitat to the extent that our consultant feels that placing additional fish habitat structures in the stream may not be necessary. Also, I did not prepare a map showing all revegetation sites since we revegetated all restoration sites.

If you have any questions or require additional information, please contact me.

Sincerely,

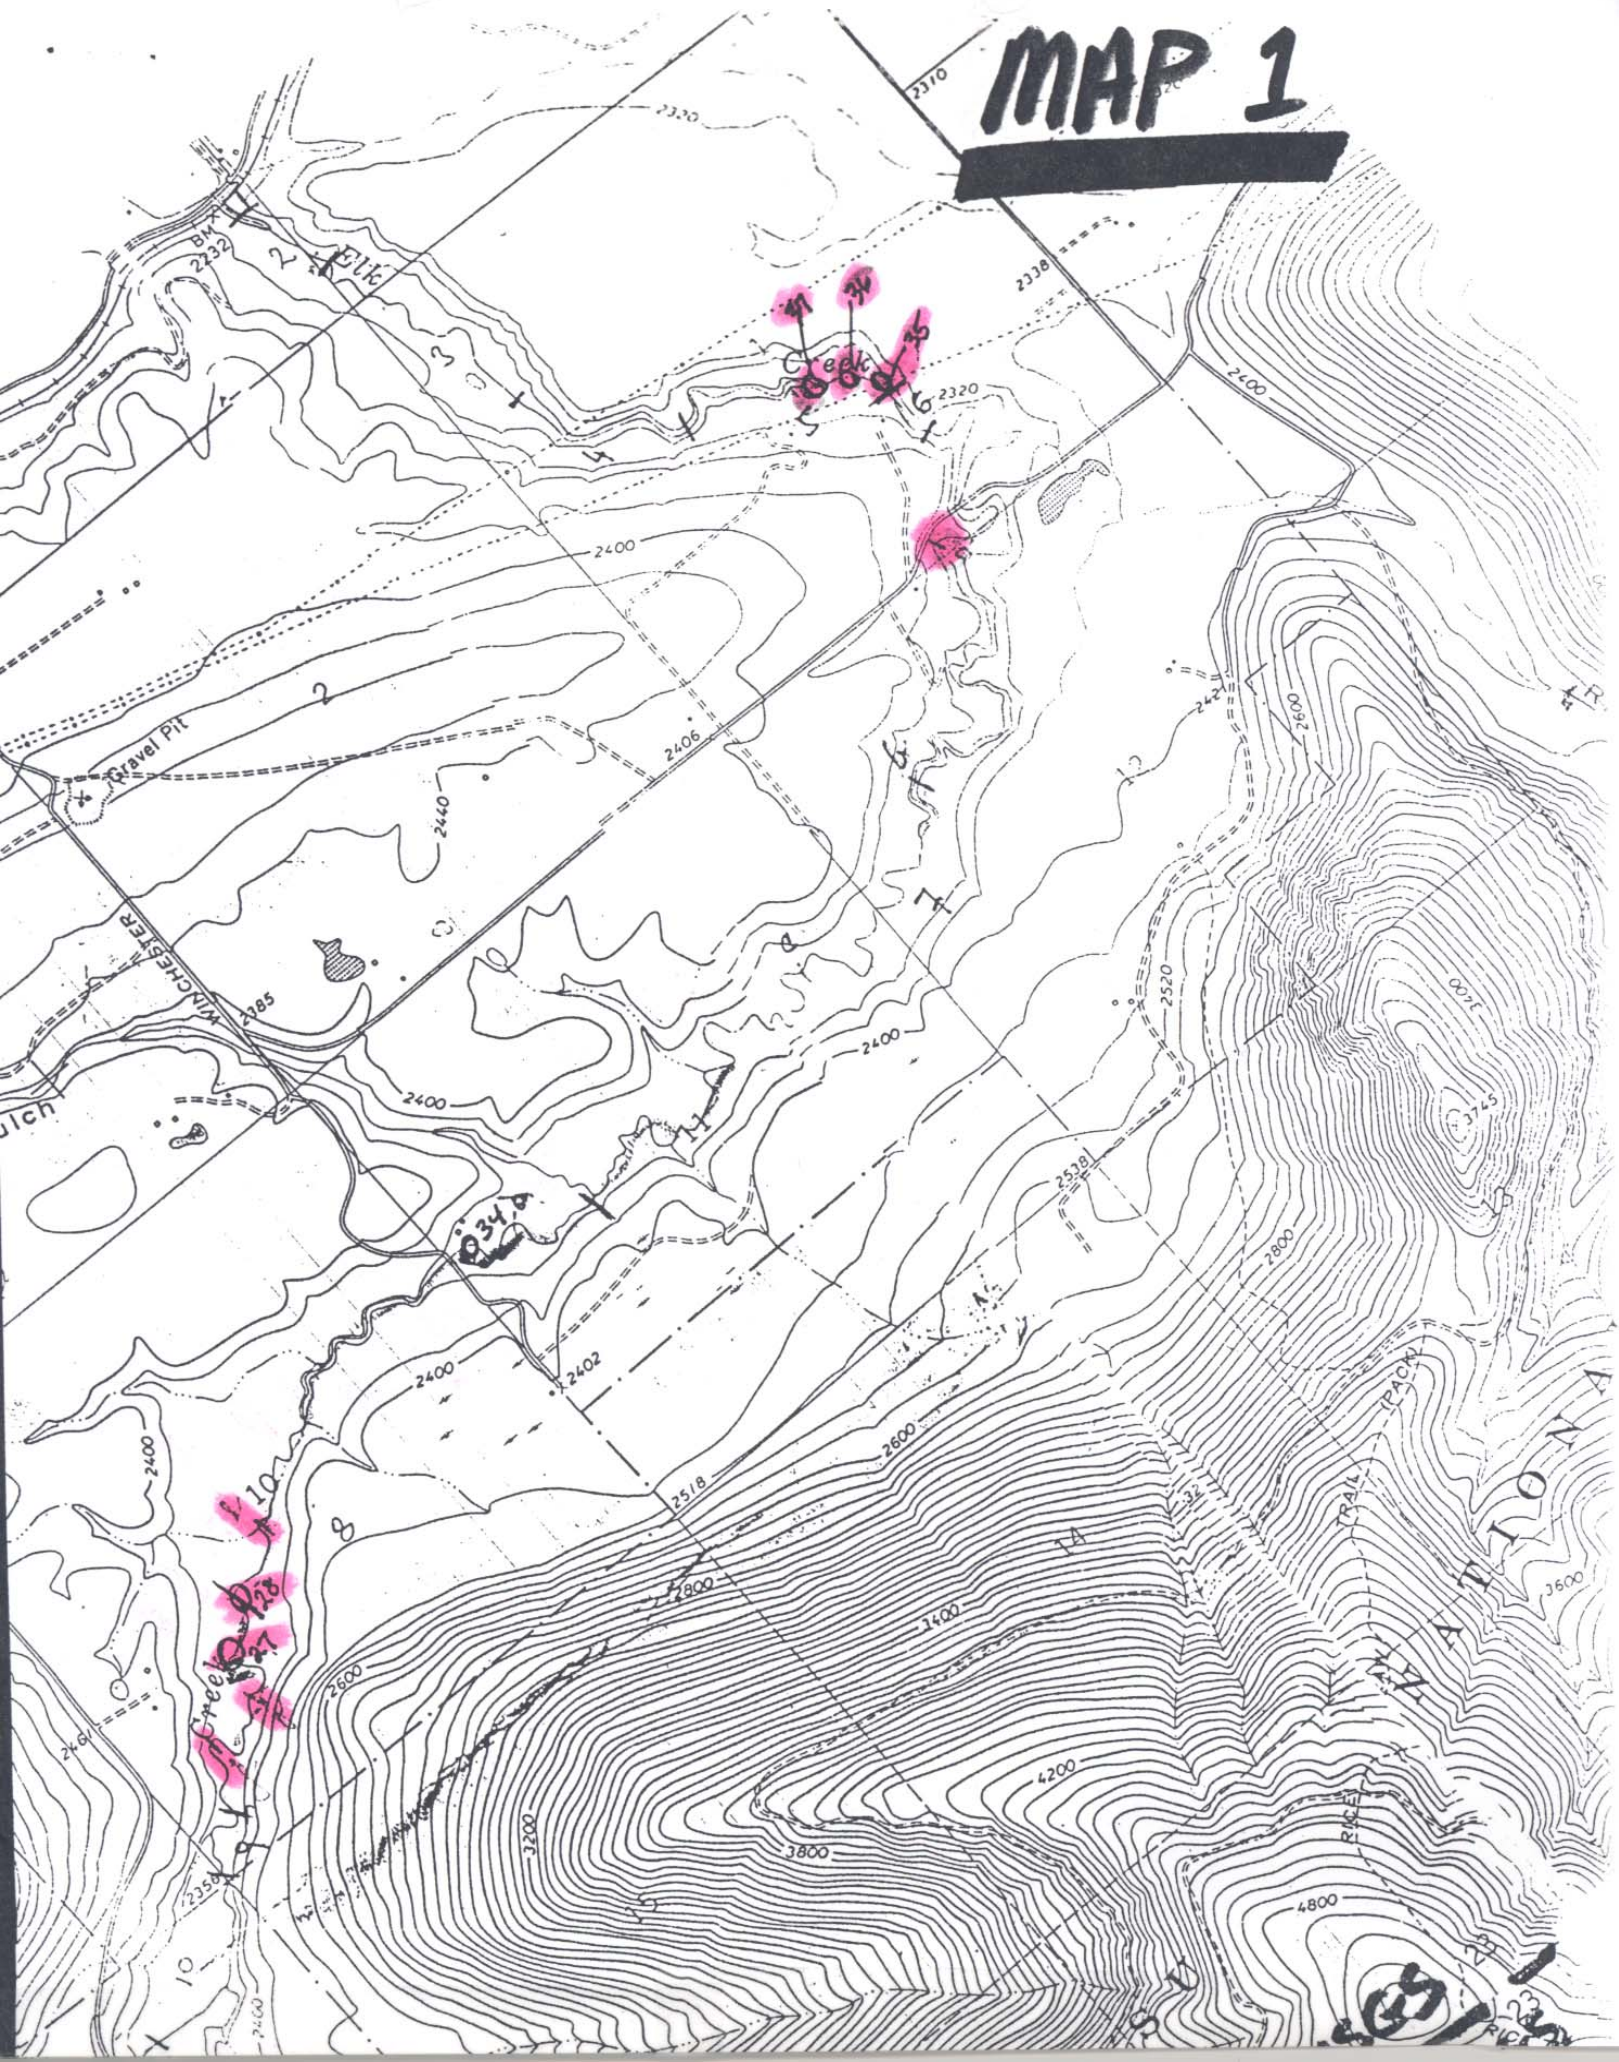

A handwritten signature in black ink, appearing to read "Mike Miller", written over the word "Sincerely,".

Mike Miller
